

Split-O-Mat® line of products for compact, reliable and efficient wastewater treatment

Split-O-Mat® wastewater treatment plants have been in use in the widest range of industrial and commercial applications for more than 40 years. EnviroChemie has now optimized this tried-and-trusted product line to enhance its performance capabilities and ease of use.

The compact plants are designed for physico-chemical treatment of wastewater to reliably assure compliance with the requisite limits. All product types in the series automate and visualize the treatment process. Various Split-O-Mat® types are available to treat batch volumes of between 200 and 1,500 litres.

The pre-assembled Split-O-Mat® plants with their plug&play design can be quickly connected and commissioned at a customer's site. EnviroChemie can supply chemical agents that are tailored exactly to the water requiring treatment, thus assuring efficient operation of the plants. The new EnviroChemie app for users will be available shortly. It enables web-based online monitoring and assures the plants are run at optimum performance.

In addition, EnviroChemie offers an optional service model for the Split-O-Mat® plants. By opting for this model, customers benefit from application engineers and water experts who ensure the reliable operation of the plants and the efficient treatment of the wastewater to comply with all official requirements specified for the plant.
