### **Greencastle Technology now belongs to Industrial Water Management**

IWM, Industrial Water Management Ltd, based in Dublin, Ireland, acquired all the shares of Greencastle Technology Ltd, Dublin, effective on 2 March 2022. The acquisition of Greencastle Technology is a great opportunity for IWM and helps to continue the expansion within the Irish water treatment and water hygiene industry.

Greencastle Technology supply water purification equipment such as reverse osmosis, water softeners, iron and manganese removal filters and resin and UV equipment. Well known in the market for their customer-focused approach, Greencastle's engineers service the healthcare, pharmaceutical, labour and food and beverage industries. Seamus Sloan set up Greencastle Technology in 2005.

Greencastle's management and service delivery will continue to operate as normal but under the IWM brand identity. Conor O'Donovan will continue to operate as Managing Director of IWM's operations in Ireland.

Following on from last year's takeover by EnviroChemie this acquisition further increases IWM's profile within the Irish water treatment and water hygiene market. It also improves the range of services and expertise that IWM can offer both our existing and newly acquired customers.

IWM's Managing Director, Conor O'Donovan, had the following to say about the acquisition:

"We welcome Seamus and his team into IWM and the larger EnviroChemie community. We are excited by this opportunity and look forward to introducing Seamus's customers to the exciting range of services that both we and EnviroChemie have to offer."

Jörg Krause, CEO of EnviroChemie adds: "The acquisition of Greencastle Technology is an important element of our growth strategy for service offerings in Ireland. We are thus expanding our business in Europe regionally. We warmly welcome the Greencastle team and are looking forward to a successful cooperation."

#### **About Industrial Water Management Ltd.**

IWM provides water treatment and water hygiene services for cooling towers and steam boilers in the pharmaceutical and food industries as well as for hospitals, universities and other institutions. With 46 years of experience and innovative solutions, IWM is an expert in disinfecting and cleaning water treatment plants and in ensuring protection against legionella. In addition, IWM conducts risk assessments and laboratory analyses. IWM focuses on continuity in customer relations with a comprehensive, application-specific range of services.

### About EnviroChemie

EnviroChemie plans, constructs and operates industrial water and wastewater treatment systems. These include energy and resource-efficient solutions for the treatment of wastewater and cooling water and water reuse. In terms of plant operation, we offer comprehensive services, operation management, contracting and water treatment chemicals.

EnviroChemie develops the technologies and water treatment chemicals in own process engineering laboratories and technology centre. Regularly they act as a partner in national and international research projects for the development of forward-looking technologies.

EnviroChemie delivers plant solutions and services throughout the world and supports customers with their responsible use of resources.

EnviroChemie is a member of the EnviroWater Group, a network of companies with specialists in the solution of a broad range of requirements for sustainable water treatment. The EnviroWater Group is part of SKion Water, a global water and wastewater technology solution provider.
