International paint manufacturer tasks Envirochemie with installing a wastewater treatment system

One of the world's leading paint manufacturers tasks Envirochemie with producing a compact wastewater treatment system for a new production facility in Egypt. Wastewater from the production of water-soluble paints is to be treated.

The system proposed by Envirochemie provides for Envirochem physico-chemical pre-treatment and Biomar biological treatment in order to safely achieve the required discharge parameters. The wastewater technology is being preassembled and tested at Envirochemie's Rossdorf site as far as possible so that it can be set up quickly and safely on site.

As Envirochemie had already successfully installed a wastewater treatment system for the paint manufacturer in Oman, the customer decided to work with Envirochemie again at its new facility in Egypt.

The installed systems feature automatic operation, optimised running costs and reliable compliance with local limit values.

Envirochemie has over 45 years' experience in installing wastewater systems in this branch of industry where it is a market leader, having installed over 30 systems.
